

Independent Practice

Draw the following geometric objects.

$\angle CAT$

\overline{FX}

$\triangle FAT$

Joe says that the figure below is named rectangle ABCD. Is he correct or incorrect? Explain your answer.

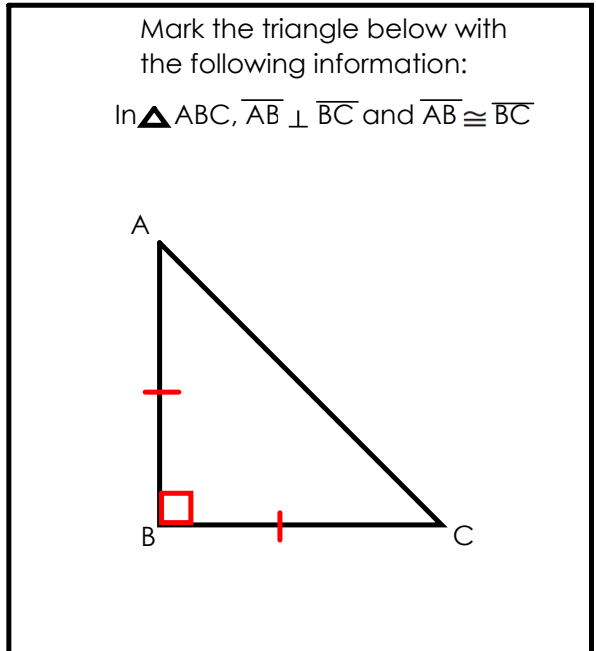

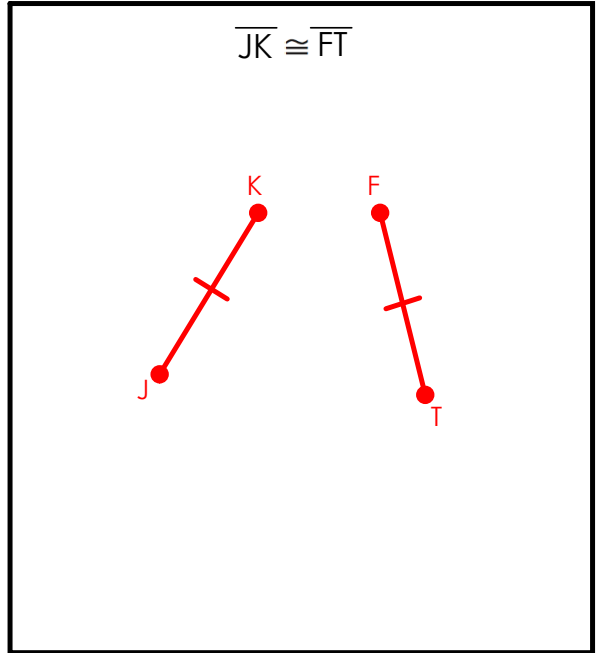

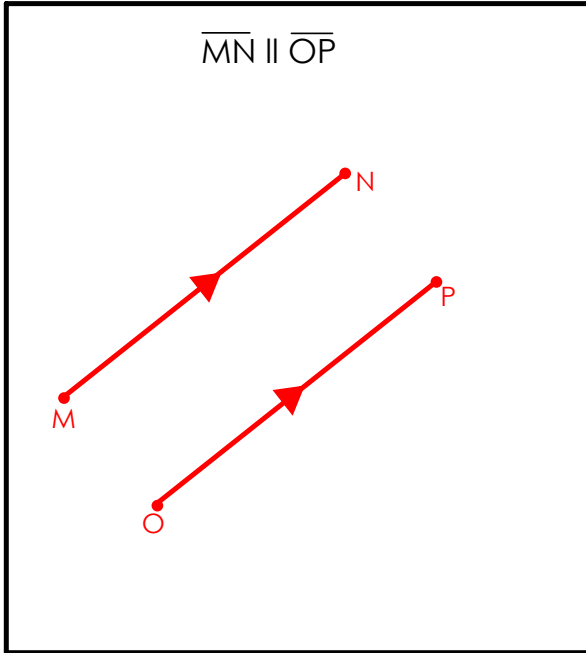

Joe is incorrect. The letters must be written as they appear clockwise or counter clockwise. A correct way would be ABDC.

Name the line below in three different ways.

1. Line l
2. \overline{AB}
3. \overline{ABC}

Draw each of the following statements.

Name the marked angle in three different ways

1. $\angle 1$
2. $\angle B$
3. $\angle ABC$

Name the marked angle in three different ways

1. $\angle 3$
2. $\angle G$
3. $\angle EGF$

Chris states the marked angle is $\angle Y$. Why is he incorrect? Answer IN A FULL SENTENCE

$\angle XYZ$

If we only use $\angle Y$ then that could refer to more than one angle. It can be either $\angle XYW$, or $\angle WYZ$, or $\angle XYZ$, because they all share the same vertex.

State the degree measure for each of the following angles:

- $\angle EBD =$ 45°
- $\angle ABF =$ 80°
- $\angle ABC =$ 100°
- $\angle FBE =$ 55°
